

**BANGLADESH ARMY UNIVERSITY OF SCIENCE AND  
TECHNOLOGY(BAUST), SAIDPUR**

**PROJECT REPORT-02**

Department: Computer Science and Engineering

Course Title: Web Engineering project

Course no: CSE 3200

Experiment No: 02

Name of the Experiment: Final Project Presentation

**Submitted To:**

Name: Md. Al- Hasan

Designation: Lecturer

❖ **Project Title:** BD Car Rental Service

❖ **Objective:**

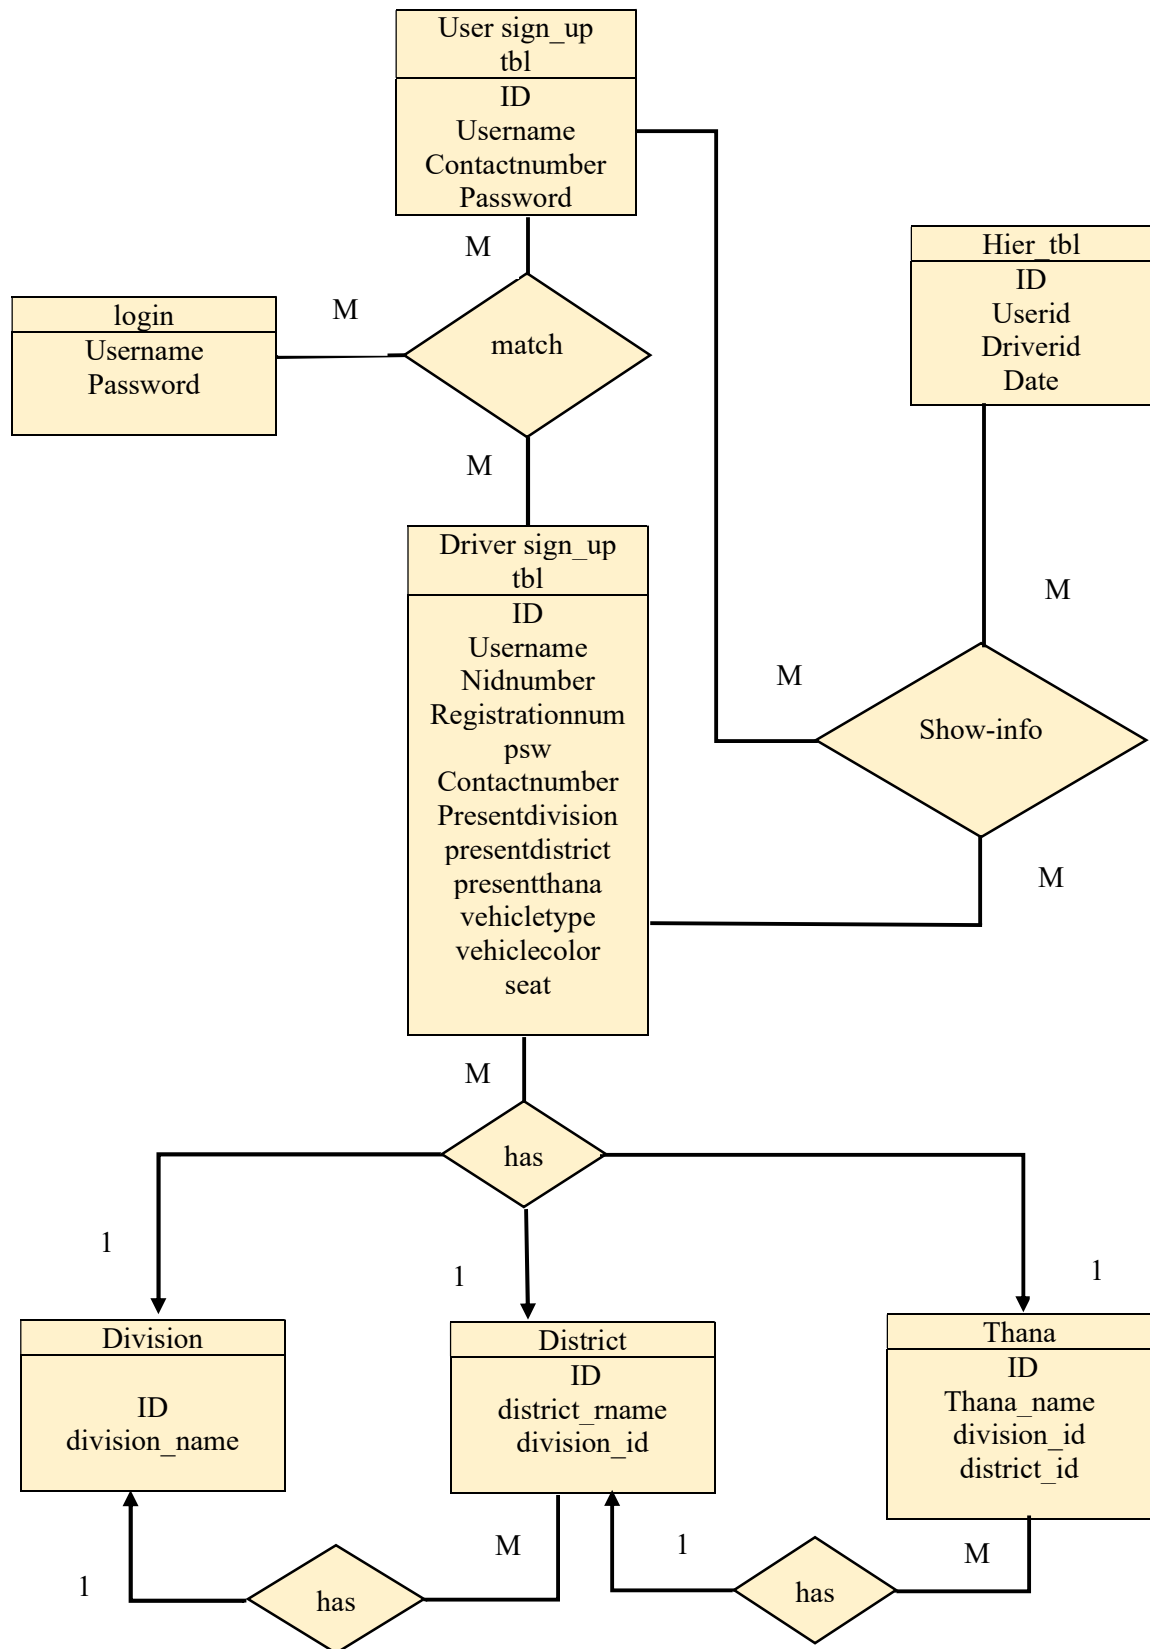

The objective of online car, ambulance Rental system are:

- The users are able to enter the company's website for searching and reserving their favorite cars easily through the internet and it can be access anywhere anytime in the country.
- Ambulance service respond rapidly to request for help in a medical emergency
- And Rural places people can also book this in their area's available car and ambulance at any time

❖ **Group members:**

NAME	ID
Anite Halim Sagor	180101007
Afsana Afrose Tanzim	180101020
Munira Akter Mou	180101023

❖ Entity-relationship diagram (ER diagram):

## ❖ Features:

**1.Index.html & about.html:** This feature enables both the users and the drivers so that they can choose how they login website as a user or driver. This page shows some options like about us which describe our website and developer. There are two more options like driver's registration and user's registration.

## USER SITE

**6.Userlogin.php & userregister.php:** These features mostly enables for the users if they want to use this site first of all they need to create an account sothat they can login this site.If they have already an account then they don't need to create an account they can directly login the site using username and password.

8.home.html: User has two options for booking. If user wants to hire a car then he will choose car option; on the other hand, if user wants to hire an ambulance then he will choose ambulance option.

Fig10: home.html

9.About.css,condition.css,driver.css,division.css,driverinfo.css,driverlogin.css,edit.css,home.css,index.css,login.css,update.css,popup.css,userregister.css: CSS is the language we use to style an HTML document. CSS describes how HTML elements should be displayed. So, these CSS pages are used to style an HTML document in our website.

10.Driver.js & login.js: Before submitting data to the server, it is important to ensure all required form controls are filled out, in the correct format. This is called **client-side form validation**, and helps ensure data submitted matches the requirements set forth in the various form controls. These pages also help to check the validation when we want to sign up or login in website.
